# Introduction | What is Augmented Reality(AR)?

It is a technology that displays virtual information on top of the object after recognizing the real-world material.

## AR Hardware

- AR Goggle/Headgear

## AR Software

- AR Emojis

- AR Games

- Pokemon Go
- Ingress

# Introduction | Augmented Reality(AR) Platform

## Don't Search, Just Scan It

Scanetchain has developed an AR platform that has a scan to search solution which enables users to access information by streaming technology that can scan instantly without storing data on your smartphone. Also, users can get information in a 1:1 matching system rather than a similar image searching algorithm.

## Simplifying ways to Access Data

## AR Marker Scan

Logo, Project, Offline Objects.

# Introduction | Differences between Similar Tech

Unlike traditional image search based technologies, Scanetchain delivers 1:1 exactly matched data, connects to the web or app through the URL link. Users can directly receive exact information about the product rather than a similar image of a product that is not very related.

## < Scanetchain >

Delivers 1: 1 matched exact data with AR.  
Users can receive accurate information  
and purchase products from linked sites.

## < Scan to Search >

## < Google Lens >

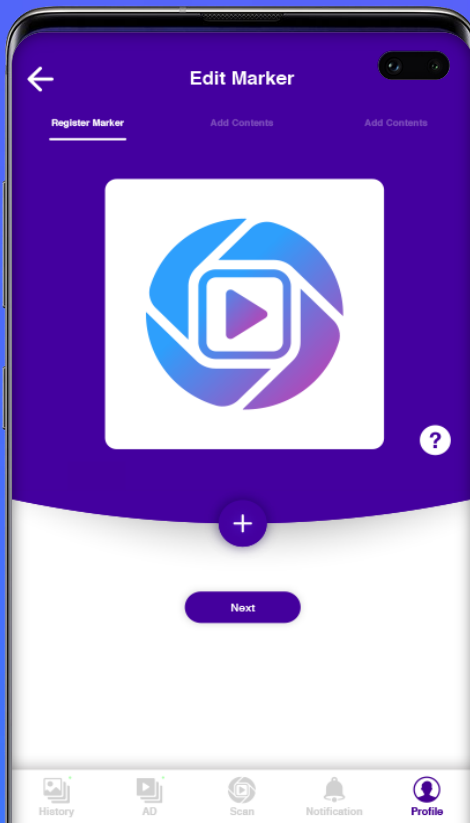

Many inaccurate information is exposed,  
and users need to re-search the exact  
information among the results.

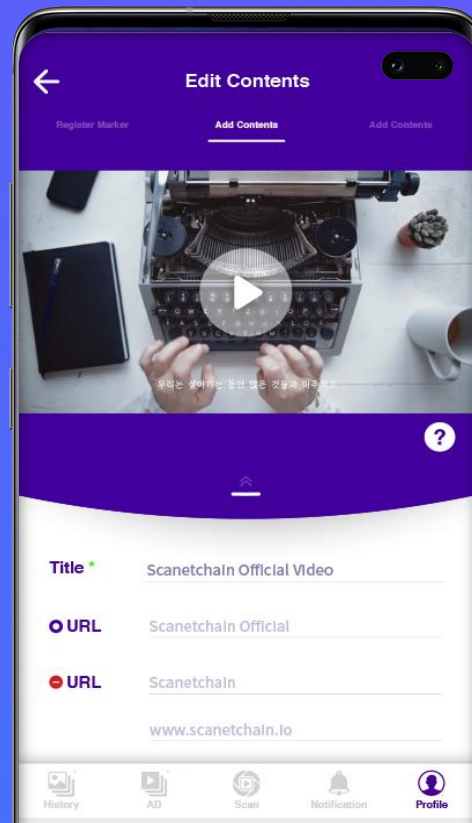

# Introduction | Commercial AR App Release(Open Beta)

AR Platform,"Scanetchain", allows anyone to easily upload augmented reality (AR) contents just like posting on social media without the need for a separate device. Users can link offline images to online videos, media, and URLs only using their smartphone.

AR Streaming

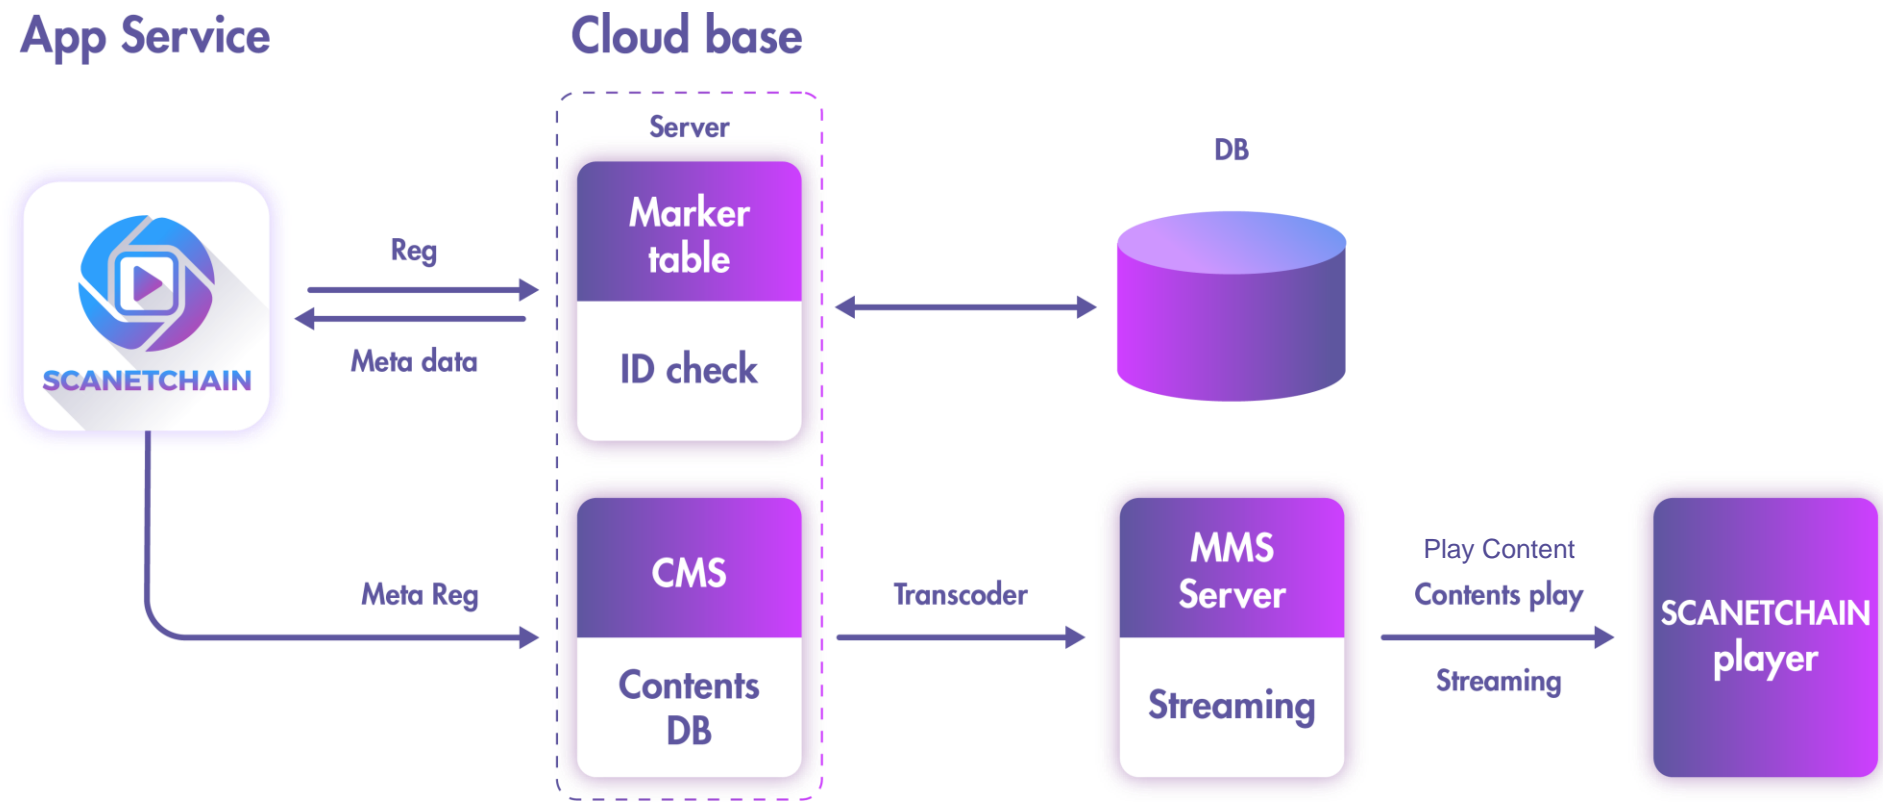

# Introduction | Faster and Lighter AR Streaming Tech

Scanetchain uses a cloud-based, data-streaming method to provide AR content to it's users. Streaming technology allows users to view content similarly to services like you tube. As soon as users scan a marker, matching data will appear on the user's device in an AR format without the need to download any content.

# Introduction | Key-features of “Scanetchain”

## Create Own AR Contents

Users can create their own AR personalized content through Scanetchain app.

## No Download Fee

Users can create their own AR personalized content through Scanetchain app.

## Wide scope of Commercial use

The processes from searching to purchasing, are combined into 1 action. Scan the marker and get all the information you need.

## Interactive Commercialized Platform

Users and advertisers can share content which will lead to beneficial promotion and advertising for both parties.

## Commercialized AR-Decentralized App

Scanetchain is the first combination of AR and blockchain which can improve security against copyright infringements.

# Introduction | Key-features of “Scanetchain”

## User-Friendly

the interface is simple and easy to use without the need for any additional knowledge as user oriented functions.

## API & SDK

Scanetchain will provide an API & SDK package that companies can install into their own app and give the AR scan experience to their customers.

## Streaming Cloud Service

Without downloading, own streaming servers lead users to use AR functions without storage problems and latency.

## 100% Accuracy of Matching Info

Differently than other scan related-app, Scanetchain provides 100% precise matching datas by AR scanning.

## Unlimited Scannable objects

Any Object with an image, picture or shape can become a scannable marker with imbedded AR content.

# Introduction | Enterprise Integration

## API/SDK to integration with every existing apps and devices.

- The SDK is a programming package that allows partners to add specific functions of Scanchain to existing mobile applications.
- The API can provide the Scanchain's specific function, allow certain apps to access to Scanchain's AR or Blockchain area and use the functions to digitally recognize objects or images.

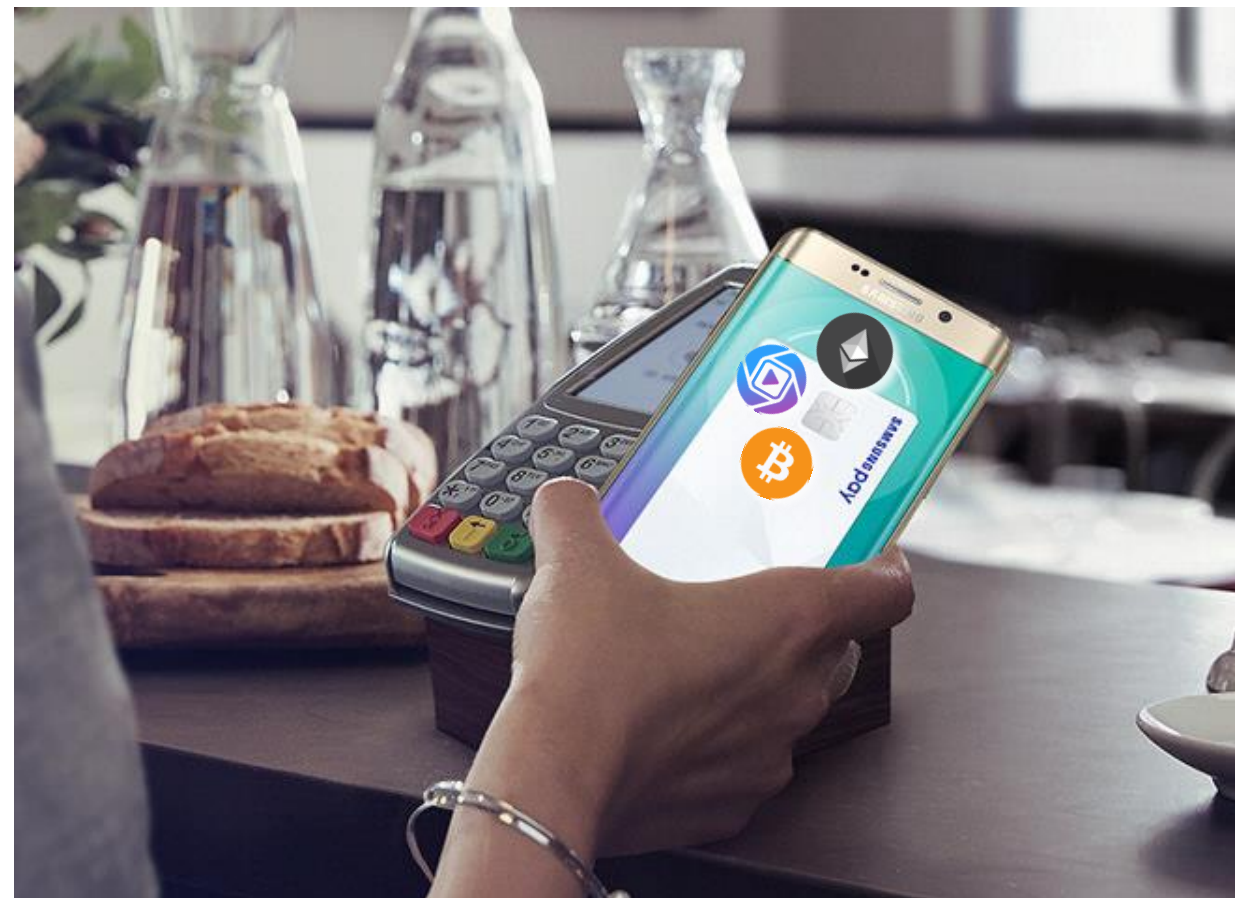

# Scanetchain AR Platform

# Scanetchain AR Platform | Commercialization of E-wallet

## A killer Dapp that can enhances the utilization of E-wallet

The Scanetchain is a blockchain based Dapp that can fully utilize the hardware cold wallet and software hot wallet built onto the smartphone, the e-wallet embedded Smartphone users can utilize SWC or other cryptocurrencies to buy and enjoy the products and services of the partners of Scanetchain

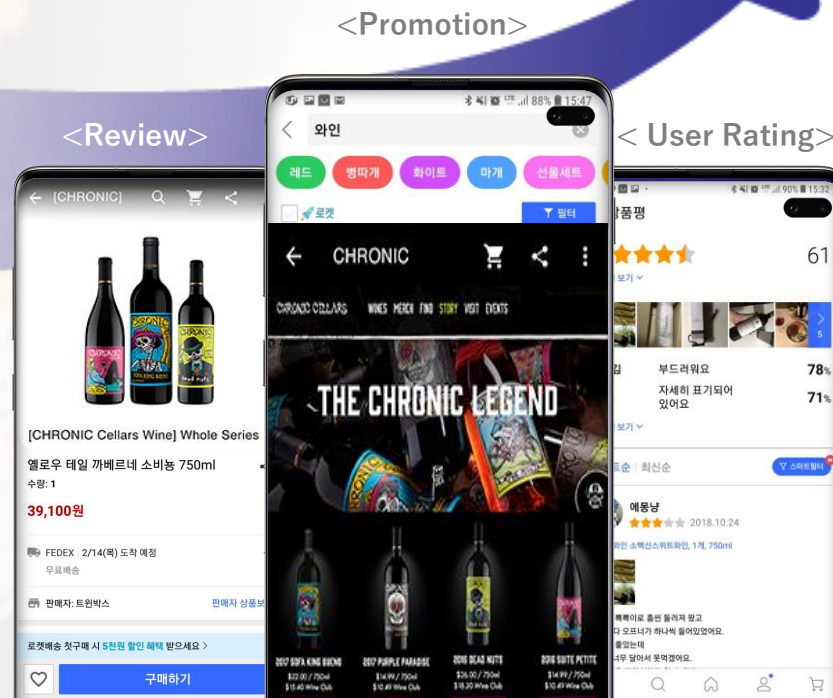

# Scanetchain AR Platform | Expansion of AR Banners

## Anything can be an AR Marker

When specific images such as a company's brand logo and product images are registered as AR markers, all of the company's logos and products that users can find in their everyday life become AR ad-banners.

# Scanetchain AR Platform | AR Commerce/ AD Platform

Enables the seller or consumer to upload, modify, and delete content

- Images and videos of registered advertisements are linked with blockchain technology to enhance safety and security.
- Consumers can easily purchase goods and access services from linked platforms.

# Use Cases

# Use Cases | Smart Factory

## Innovation in work and safety environments

- Employees can watch workplace safety training program on their smartphones through scanning the safety training markers in the factory and through the links that follow they can also e-sign for complete of education. Administrators can manage whether workers watch the safety training videos until the end and signed.
- By setting the workbench as a marker to improve understanding of a specific task, detailed work instructions can be delivered to the live video when the worker scans the marker.

< Work process guide using AR >

< Work Safety and Security Guide Training >

# Use Cases | Business Fields

## Utilization of smart business such as meeting and network management

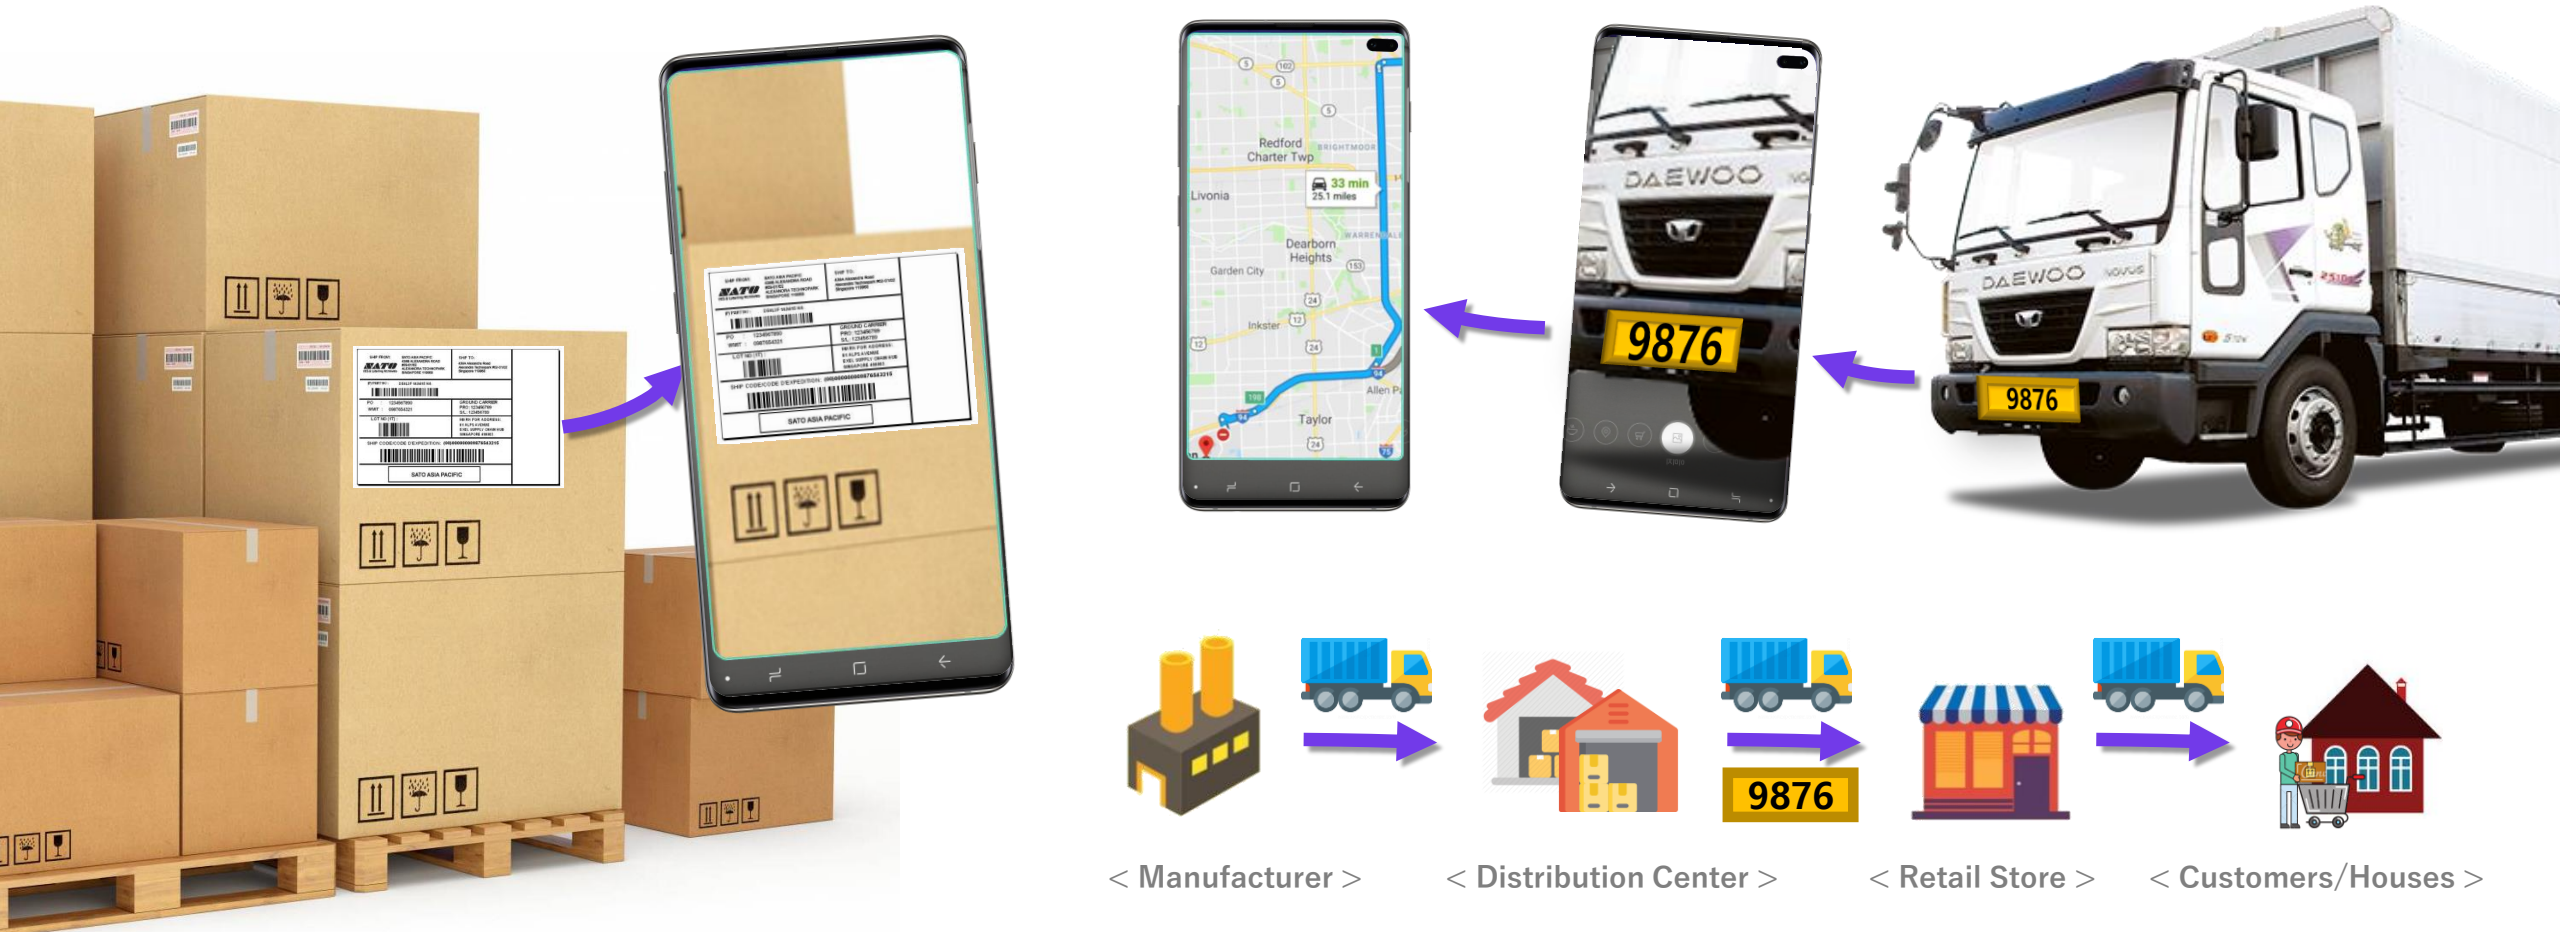

- You can register meeting partner's business card as a marker and partner's photo or a meeting video as a matching data to view them whenever necessary. Just send person's business card to transfer the person's photo and meeting videos.
- Scan calendar to check today's meeting and agenda or scheduled work.

# Use Cases | Transportation Fields

## Simple Scanning, Fast Tracking

- By simply scanning the license plate of the vehicle, the distribution HQ or supervisors can review the logistics flows and confirm the deployed logistic vehicles.
- The cargo Inspector also can scan the cargo label to verify that the cargo has been transported correctly.

# Use Cases | Health Care Fields

## Easy to treat and care patients

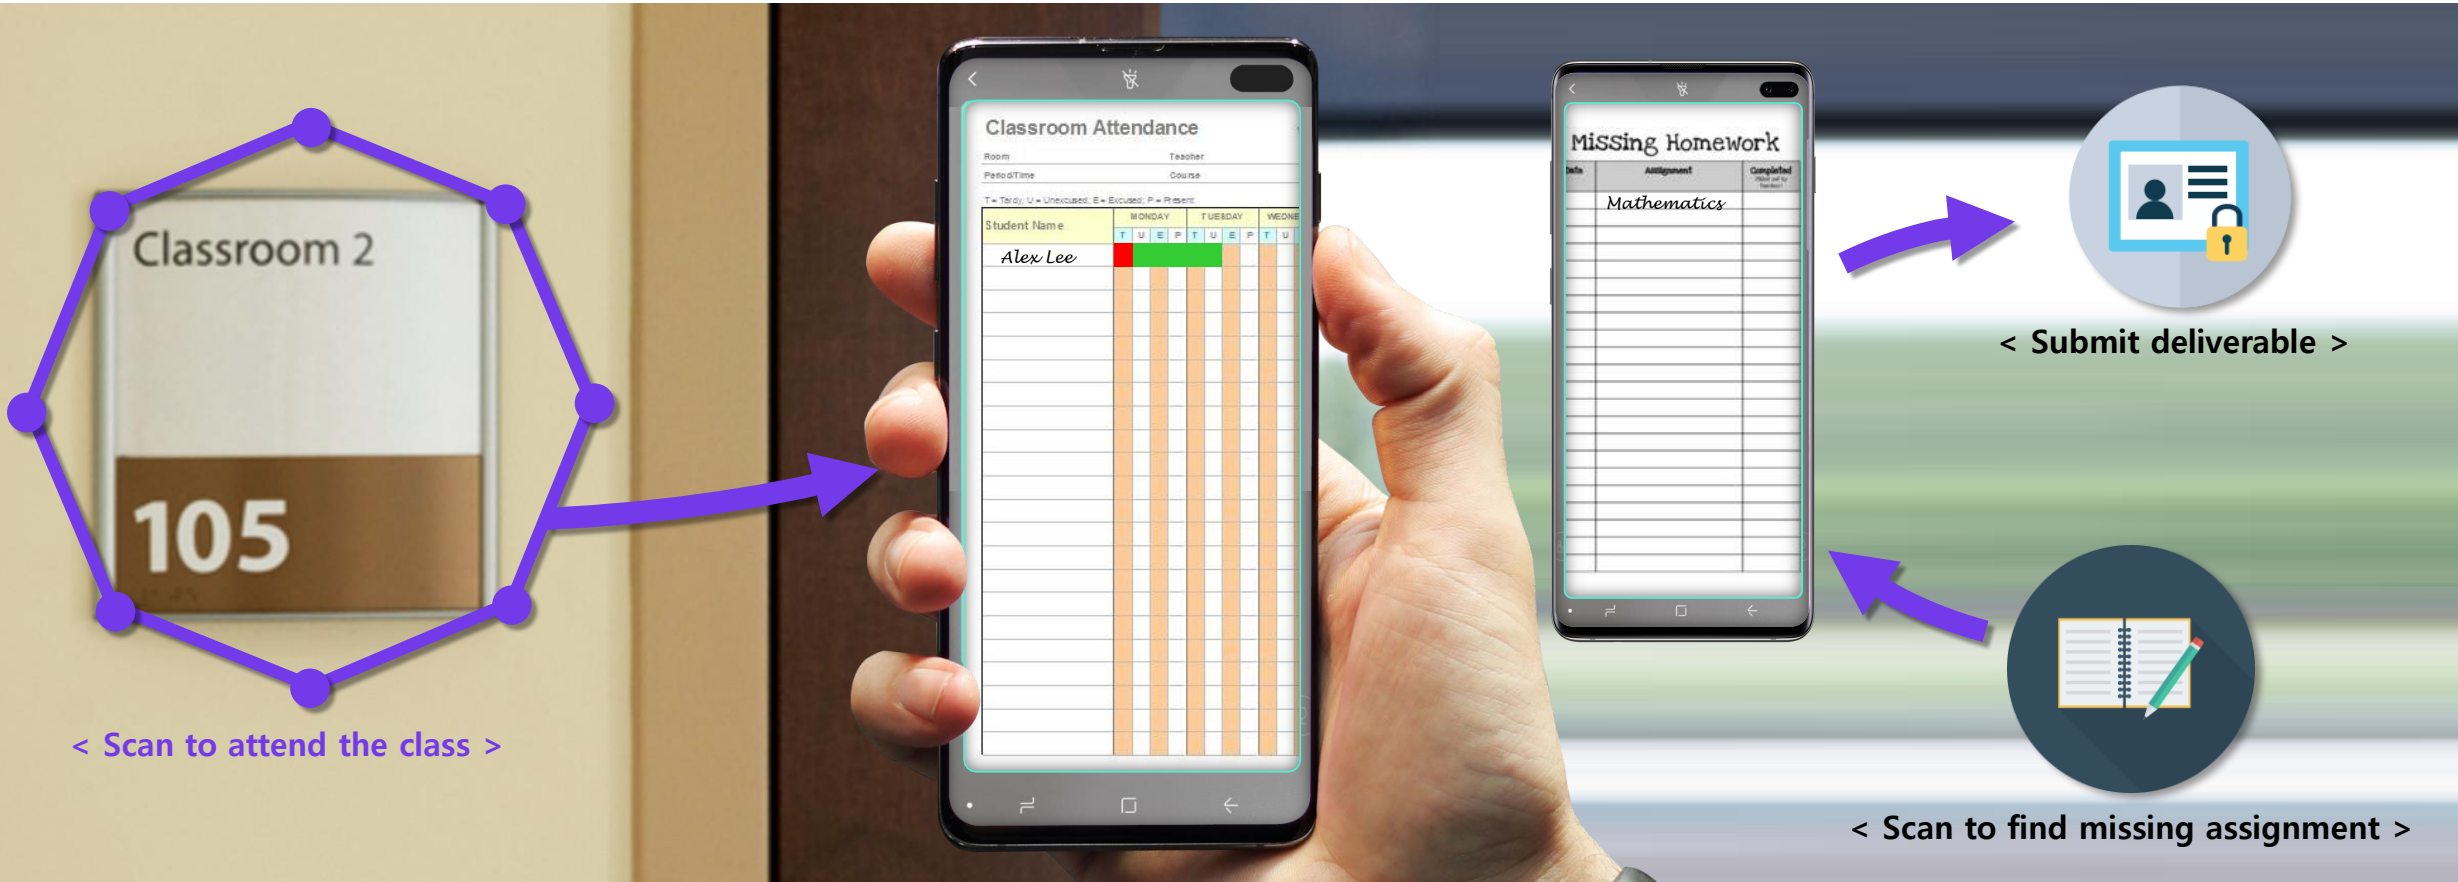

- By scanning the patient's bracelet label, doctor or approved agents can watch the patient's history of hospitalization, treatment, and the medicine prescribed to the patient.
- By scanning the label on the bottle, peoples can instantly see the ingredients, side effects, efficacy and usage of the drug.

## Use Cases | Education Fields

## Smart Attendance Managing and Paper Authentication

- Scan the student's certificate and degree to prove authenticity with the issuer.
- Scan a class mark to attend the class and teacher can check students who were absent.
- Absent students can scan a homework mark to find assigned homework and the teacher can also check and review students activities and give feedback for parents and students.

# Use Cases | Financial Fields

## Tamperproof and Easily Verifiable System

- Third parties can simply scan the account statement to verify for loan approvals, proof of net worth and so on.
- Simple scan helps customer's check to be verified and cleared as quickly, efficiently and accurately as possible.

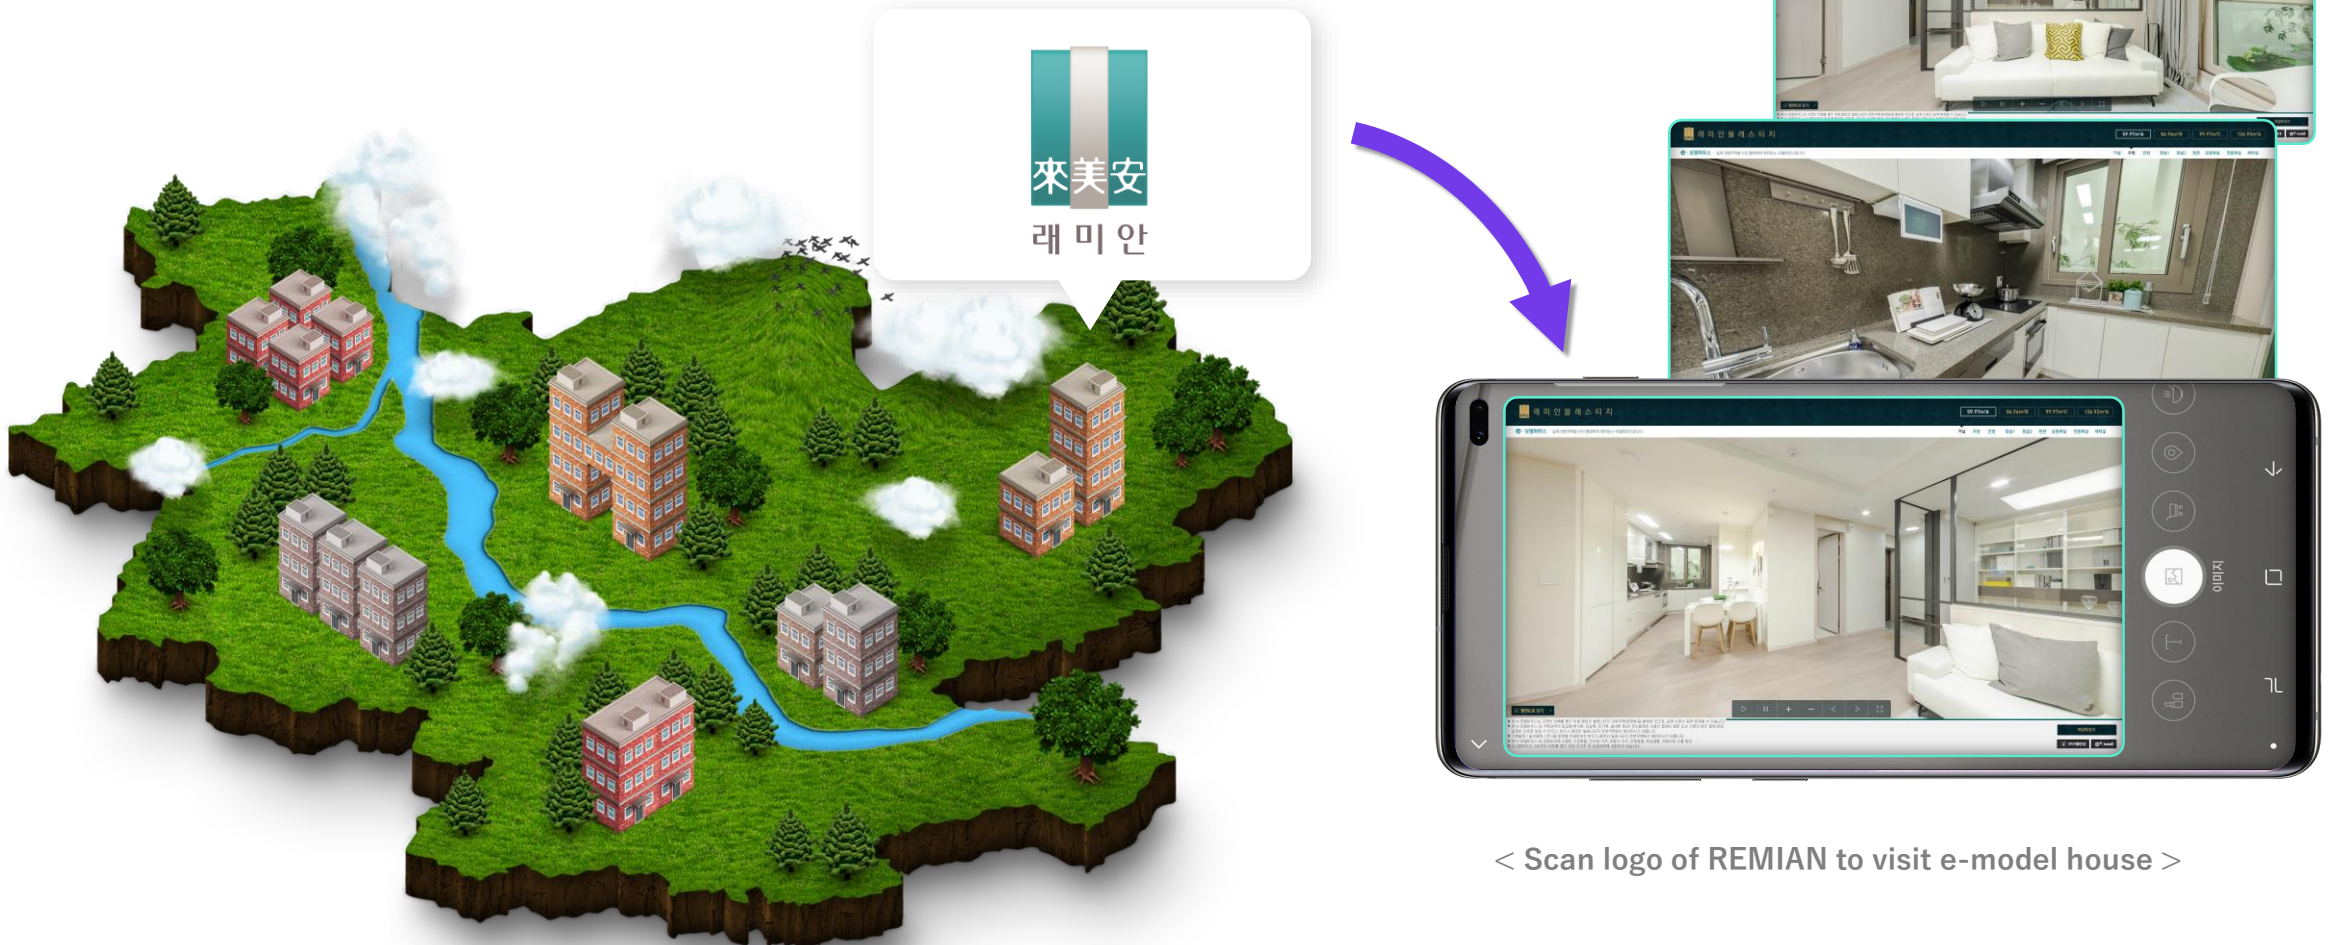

# Use Cases | Real Estate Fields

## Scan to search real estate information with AR streaming

- You can scan the apartment logo or building photo of property and instantly find the inside information of the property and visit the model house etc.

# Use Cases I Unlimited AR Ads both Online and Offline

AR events can create consumer interest by using intuitive products information.

- In addition to having the product information in offline locations, users can create interest among consumers by adding multimedia content.
- To maximize marketing efforts, users can utilize AR for existing events to let consumers experience diverse content.
- There are no limits to time and space

< AR shopping event at subway platform >

# Use cases | Simplifying the Ways to Access Information

## Beyond the limits of product display in offline stores

- Customers can AR scan the packaging of the displayed products for immediate access to useful information.
- When a seller uploads product packaging or brand logos as AR content, the offline store itself becomes an AR experience zone.

<AR Scanning Products>

<AR Experience Promotions>

# Use Cases I An Innovative Way to Purchase

## Online and offline AR platform optimized for mobile

- Users can scan, purchase, and repurchase products conveniently and at a higher rate than before.
- Distributing validated products can help users gain trust in the brand and services.
- Product promotion, purchasing, and delivery is completed in one single AR scan.

Use everyday products as Markers

Display Validated Information Using AR

Fast and Convenient Purchase

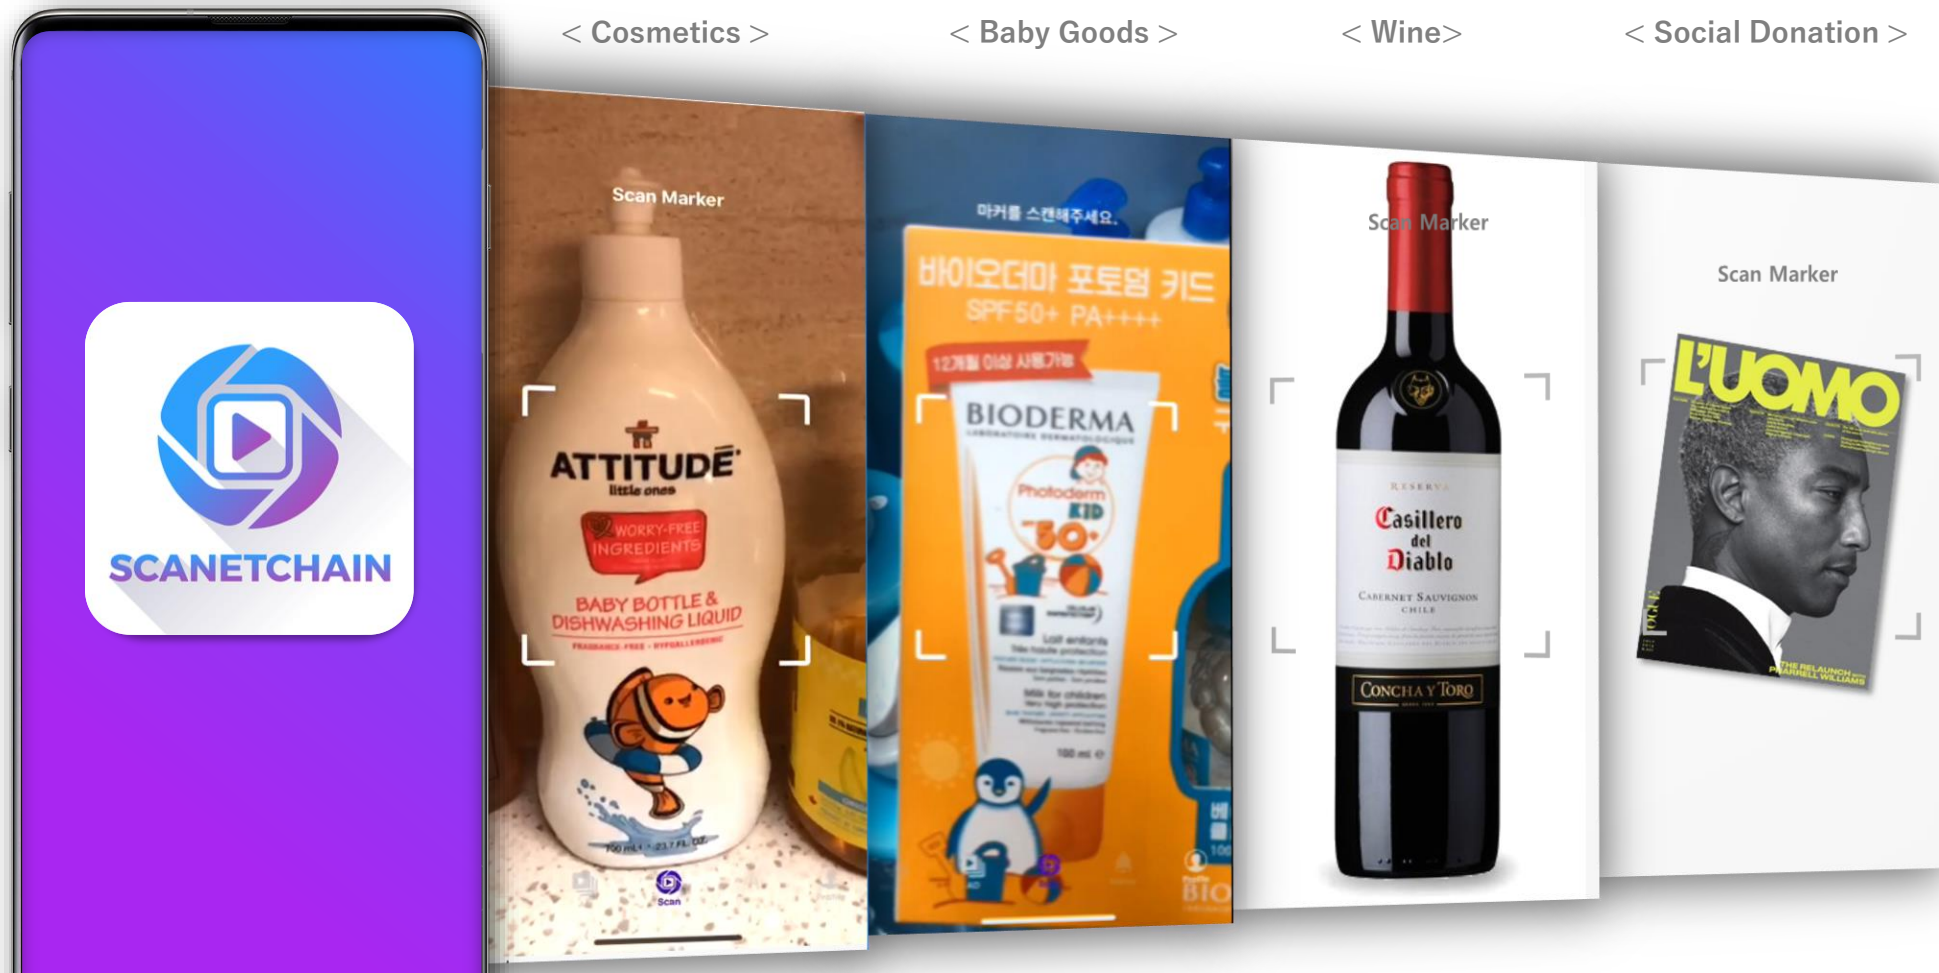

# Use Cases | Real Use Cases

## Fields of use cases by Scanetchain

- Baby goods : 200+ products registered.
- Cosmetics : 100+ products registered.
- Wine : World wide distributor partnership.
- Social Campaign : Donation / contribution campaign.

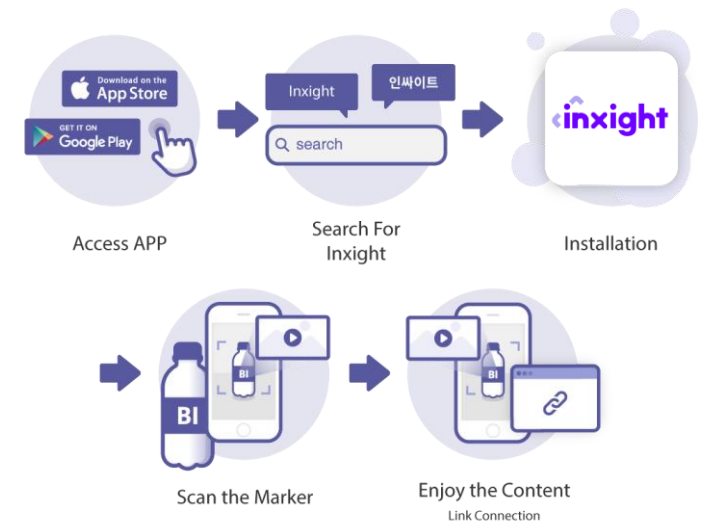

# Roadmap

# Introduction of Inxight

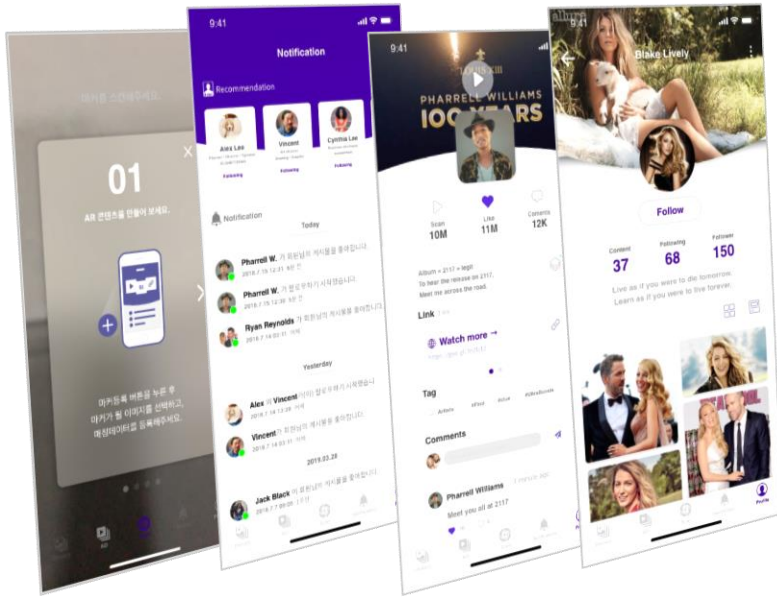

- UX/UI Update
- POA incentive engine
- New Partnerships
- New listings

# Introduction of Inxight

- **UI/UX Update**

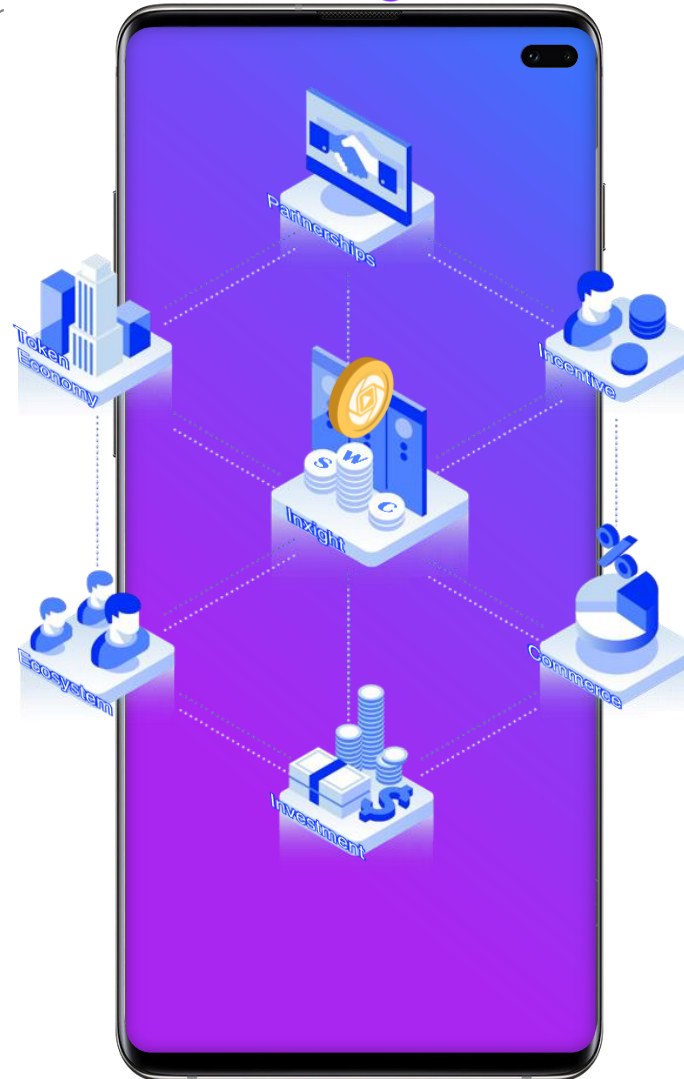

- New functions and design to enhance user experiences.

- **New Listings**

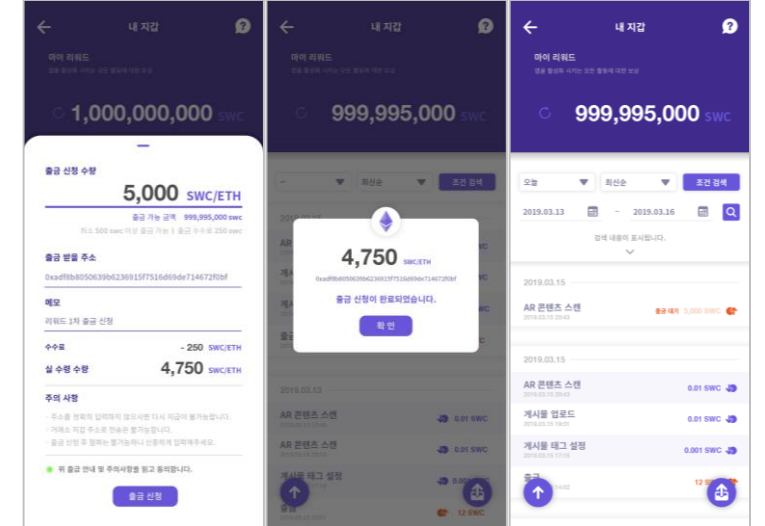

New Exchanges will be unveiled soon  
With bounty & airdrop events!

- **POA (Proof Of Activity) Update**

- Incentive engine with SWC reward

- **New Partnerships**

- Collaborate with existing enterprise players in various fields to make token ecosystem.
